1. DATABASE STATUS

This deliverable summarises the status of the variables databases available and created during the analysis tasks of the workpackage “WP4 – Analyses”. For more information about the different variables defined please read the documents D4.1 (D4.1 – “Classification Report”) and D11.1 (D11.1 - “Metrics Dictionary”). The structures of the databases are also described in D3.1 (D3.1 - “Database specification”).

The next statistics show the current status of the database:

- Total number of databases with variables: 4413¹
 - Databases with source code variables: 1374
 - Databases with mailing lists variables: 470
 - Databases with issue tracking variables: 2569
- Total number of projects with some databases with variables: 2412
 - Projects with databases with source code variables: 1193
 - Projects with databases with mailing lists variables: 470
 - Projects with databases with issue tracking variables: 1476

A file with the dumps from the variables databases are available in the next link:

<http://melquiades.flossmetrics.org/data/deliverables/D4.2.tar.gz>

¹ The difference between the “total number of databases with variables” (4403) and the “total number of projects with databases with variables” (2412) is due to the fact that some projects may have more than one datasource, and a database with variables is calculated for each datasource.
